Executive Summary	VII
1 Introduction	1-1
1.1 Projects objective and overview.....	1-1
1.2 Legislation and assessment methods applied.....	1-3
2 Emissions Inventory	2-1
2.1 Road Traffic Emissions.....	2-2
2.2 Industrial Emissions.....	2-19
2.2.1 Industrial Boilers.....	2-19
2.2.2 Dry Cleaners.....	2-22
2.2.3 Hotel Industry.....	2-23
2.3 Domestic heating and other sources.....	2-24
2.3.1 Domestic heating.....	2-24
2.3.2 Agriculture.....	2-25
2.3.3 Petrol stations.....	2-25
2.3.4 Airports.....	2-26
2.4 Total emissions in Cyprus.....	2-27
2.5 Uncontrolled diffusive emission sources.....	2-36
2.5.1 Sources the emissions of which are difficult to be estimated.....	2-36
2.5.2 Existence of unknown and uncontrolled sources.....	2-36
3 Diffusive Sampling	3-1
3.1 Methods of diffusive sampling.....	3-1
3.2 Sites and periods.....	3-3
3.2.1 Sites classification.....	3-3
3.2.2 Sampling periods and exposure times.....	3-3
3.3 Pollutant concentrations at the sites.....	3-5
3.3.1 Nitrogen dioxide – NO ₂	3-5
3.3.2 Sulphur dioxide – SO ₂	3-9
3.3.3 Benzene – C ₆ H ₆	3-13
3.3.4 Ozone – O ₃	3-17
4 Continuous Monitoring	4-1
4.1 Sites and period.....	4-1
4.1.1 Monitoring sites and monitoring periods.....	4-1
4.1.2 Components monitored.....	4-2
4.2 Results from continuous monitoring.....	4-4
4.2.1 Statistical evaluation of the results.....	4-12
4.2.2 Diurnal courses.....	4-27
4.3 Wind and pollutant roses.....	4-43
4.4 Conclusions from continuous monitoring.....	4-51
5 Particulate Matter	5-1
5.1 Sampling Programme.....	5-1

5.2	Results of Sampling Programme.....	5-6
5.2.1	Limit values.....	5-6
5.2.2	PM ₁₀ concentration in Cyprus.....	5-7
5.2.3	PM _{2.5} situation in Cyprus.....	5-15
5.3	Filter characteristics of different sites.....	5-20
5.3.1	Filters in GCC and TCC.....	5-20
5.3.2	Filter characteristics on special events.....	5-23
5.4	Source Identification of PM ₁₀	5-25
5.4.1	Source identification with Enrichment Factor.....	5-25
5.4.2	Source identification with Receptor Modelling.....	5-29
6	Tethered Balloon Measurement in Cyprus.....	6-1
6.1	Introduction.....	6-1
6.2	Aims of the study.....	6-1
6.3	Classification of tethered balloon campaign days.....	6-2
6.4	Analysis of ground wind speed and direction in Cyprus.....	6-10
6.4.1	Global scale.....	6-10
6.4.2	Synoptic scale.....	6-10
6.4.3	Mesoscale.....	6-12
6.4.4	Analysis of wind speed and wind direction for summer and winter months.....	6-15
6.4.5	Analysis of wind speed and wind direction during the campaign days.....	6-20
6.5	Analysis of the vertical profiles of the meteorological parameters with the help of radio soundings during campaign days.....	6-28
6.5.1	First campaign.....	6-29
6.5.2	Second campaign.....	6-30
6.6	Evaluation of balloon soundings.....	6-30
6.6.1	Overview of inversions, ground level meteorological parameters and pollutants concentrations.....	6-30
6.6.2	Description of some typical soundings.....	6-36
6.7	Description of isopleth diagrams.....	6-52
6.7.1	First campaign Nicosia.....	6-29
6.7.2	First campaign Limassol.....	6-53
6.7.3	Second campaign Nicosia.....	6-53
6.7.4	Second campaign Limassol.....	6-54
6.8	Conclusions.....	6-75
6.8.1	Nicosia.....	6-75
6.8.2	Limassol.....	6-76
7	Modellings of Pollutant Distribution.....	7-1
7.1	Requirements and applied methods.....	7-2
7.2	Pollutants distribution – results of interpolation.....	7-2
7.2.1	Mean annual NO ₂ distribution in Cyprus.....	7-3
7.2.2	Mean seasonal SO ₂ distribution over Cyprus.....	7-4
7.2.3	NO ₂ distribution in Nicosia.....	7-5
7.2.4	NO ₂ distribution in major cities of Cyprus.....	7-8
7.2.5	Spatial distribution of SO ₂ in Cyprus.....	7-12

7.2.6	SO ₂ distribution in urban areas.....	7-14
7.2.7	Spatial distribution of Benzene in Cyprus.....	7-17
7.2.8	Benzene distribution in urban areas.....	7-17
7.2.9	Spatial distribution of Ozone in Cyprus.....	7-21
7.3	Neural Network Modelling.....	7-22
7.3.1	Input parameters.....	7-22
7.3.2	Results.....	7-23
8	Air Quality Comparison between Cyprus and European Cities.....	8-1
8.1	NO ₂ Comparison.....	8-1
8.2	SO ₂ Comparison.....	8-2
8.3	Benzene Comparison.....	8-3
8.4	PM ₁₀ Comparison.....	8-4
8.5	References.....	8-5
9	Overall Evaluations and Recommendations.....	9-1
9.1	Requirements for zoning and assessment.....	9-1
9.2	Summary of the preliminary assessment results.....	9-4
9.2.1	Critical components, locations and classification according to site categories.....	9-4
9.2.2	Particulate Matter and sources of pollutants.....	9-9
9.2.3	Meteorological conditions which influence the pollution load and critical times of seasons for high pollutant concentrations	9-13
9.3	Proposal for zoning.....	9-15
9.3.1	Concentration levels at different selected sites in Cyprus.....	9-15
9.3.2	Proposal for zoning.....	9-15
9.3.3	Proposal for monitoring stations in the zones.....	9-17
9.4	Reference Laboratory.....	9-19
9.5	Need of Personnel.....	9-20
9.5.1	Personnel in GCC.....	9-20
9.5.2	Personnel in TCC.....	9-21
9.6	Recommendation for Air Quality Improvement measures in Cyprus.....	9-22
9.6.1	General.....	9-22
9.6.2	Reduction of traffic caused air pollution.....	9-22
9.6.3	Ventilation of cities – planning recommendations.....	9-26
9.6.4	Reduction of industrial air pollution.....	9-28
9.6.5	Domestic heating, warm water preparation and other individual firings.....	9-28
9.6.6	Avoidance of wild and diffusive emissions including waste deposits and agriculture.....	9-29
9.6.7	Information and education of the public.....	9-29
9.6.8	Responsibilities for the realisation of air quality improvement measures.....	9-30
9.6.9	Priorities of air quality improvement measures.....	9-32
